I Introduction.....8

II The Intelligent Network.....10

II.1	INTRODUCTION	10
II.2	PURPOSES AND PRINCIPLES OF THE INTELLIGENT NETWORK.....	10
II.3	CONCEPTUAL MODEL OF THE INTELLIGENT NETWORK.....	12
II.4	SERVICE PLANE	15
II.4.1	CS-1 services.....	15
II.4.2	CS-1 service features.....	20
II.4.3	Application to the Virtual Private Network service (VPN)	24
II.4.3.1	Abbreviated dialing.....	25
II.4.3.2	Authorization code.....	25
II.4.3.3	Information operator	25
II.4.3.4	Follow-me diversion	26
II.4.3.5	Off-net access.....	26
II.4.3.6	Off-net calling.....	26
II.4.4	CS-2 services.....	27
II.4.4.1	Telecommunication services	27
II.4.4.2	Service management services.....	28
II.4.4.3	Service creation services	29
II.4.5	Service creation environments	30
II.4.5.1	SCE requirements	30
II.4.5.2	Description of an SCE.....	32
II.4.5.3	Service creation environment requirements	34
II.5	GLOBAL FUNCTIONAL PLANE.....	37
II.5.1	Global functional plane for CS-1.....	37
II.5.1.1	SIB structure	37
II.5.1.2	CS-1 SIBs.....	39
II.5.1.3	CS-1 Points Of Initiation.....	52
II.5.1.4	CS-1 Points Of Return	53
II.5.1.5	Example of services described in the global functional plane.....	54
II.5.2	CS-2 Global functional plane.....	56
II.5.2.1	BASIC CALL UNRELATED PROCESS SIB (BCUP), POIs and PORs.....	57
II.5.2.2	CS-2 SIBs.....	58
II.5.2.3	HLSIB.....	58
II.5.2.4	Parallel service processing	58
II.5.3	Response of the manufacturers in SIB design	59
II.6	DISTRIBUTED FUNCTIONAL PLANE.....	61
II.6.1	Functional entities of the CS-1 distributed functional plane.....	61
II.6.1.1	Call processing related functions	61
II.6.1.2	Service related functions	62
II.6.1.3	Management functions	62
II.6.1.4	Relationships between the functional entities	63

II.6.2	<i>SSF/CCF model</i>	64
II.6.2.1	SSF/CCF structure	64
II.6.2.2	The call processing model.....	65
II.6.2.3	User-BCSM interactions	71
II.6.2.4	The IN-Switching State Model (IN-SSM).....	73
II.6.2.5	Sequence of events for a service	74
II.6.3	<i>Translation of SIBs in the distributed functional plane</i>	76
II.6.3.1	Information flows associated to SIBs.....	77
II.6.3.2	Event reporting.....	82
II.6.3.3	Call setup and release.....	82
II.6.3.4	Call party handling.....	83
II.6.3.5	Call initiation	83
II.6.3.6	Translation of POIs and PORs in the distributed functional plane.....	84
II.6.3.7	SIB unrelated information flows	86
II.6.4	<i>From the global functional plane to the distributed functional plane through an example</i>	86
II.6.5	<i>Functional entities of the CS-2 distributed functional plane</i>	89
II.7	PHYSICAL PLANE	91
II.7.1	<i>Physical entities</i>	91
II.7.2	<i>INAP protocol</i>	97
II.7.3	<i>Method for IN CS-1 service creation and introduction</i>	99
II.7.4	<i>Conclusion</i>	100
II.8	MEASUREMENT OF QUALITY OF SERVICE FOR THE INTELLIGENT NETWORK	
	101	
II.8.1	<i>Quality of service criteria</i>	101
II.8.1.1	Distribution of busy hour call attempts (BHCA).....	101
II.8.1.2	Traffic characteristics.....	101
II.8.1.3	Signaling traffic load.....	102
II.8.1.4	Call processing logic	103
II.8.1.5	Call processing data	103
II.8.1.6	Communication paths.....	103
II.8.1.7	New network components and functions	103
II.8.1.8	Additional complexity of traffic estimation	104
II.8.1.9	Redimensioning	104
II.8.2	<i>Dimensioning of the Intelligent Network</i>	104
II.8.2.1	Determination of network load.....	104
II.8.2.2	Resource allocation and component dimensioning	105
II.9	IN AND INTERNET.....	108
II.9.1	<i>PINT</i>	109
II.9.1.1	Introduction.....	109
II.9.1.2	Interest of PINT	109
II.9.1.3	Example of Click-to-dial-back service scenario.....	110
II.9.1.4	Example of Click-to-fax service scenario	111
II.9.1.5	Example of click-to-fax-back service scenario.....	112
II.9.1.6	Examples of Voice-access-to-content service scenarios.....	112
II.9.1.7	Architectural concepts : implication of the PINT model within the intelligent network.....	113
II.9.1.8	Functional architecture for IN support of the Internet.....	115
II.9.1.9	Service description in the distributed functional plane.....	118
II.9.1.10	Problems encountered.....	122
II.9.1.11	And after ?	125

II.9.2	WebIN	125
II.9.2.1	WebIN architecture	126
II.9.2.2	Update of the intelligent network databases from the Internet	128
II.9.2.3	Distribution of the service data within the intelligent network and the Internet.....	130
II.9.2.4	Share-out of the service logic (and data) between the intelligent network and the Internet.....	131
II.9.2.5	A fourth phase : triggering of IN services from the Internet	133
II.9.3	Conclusion	134
II.10	IN AND GSM : CAMEL	135
II.10.1	The GSM standard	135
II.10.2	CAMEL	136
II.10.3	CAMEL architecture	137
II.10.4	CAMEL phase 1 principles	140
II.10.4.1	Description of CAMEL O_BSCM.....	140
II.10.4.2	Description of CAMEL T_BSCM.....	140
II.10.4.3	Detection points.....	141
II.10.4.4	Call set up within a CAMEL integrated network:.....	142
II.10.4.5	Call reception within a CAMEL integrated network	143
II.10.4.6	Functionalities	145
II.10.5	Additional functionalities of CAMEL phase2.....	146
II.10.5.1	Specialized resources.....	146
II.10.5.2	Interaction between the service and the subscriber	146
II.10.5.3	Billing.....	147
II.10.5.4	Service security.....	147
II.10.5.5	Triggering and service logic optimization	147
II.10.5.6	CAMEL phase 2 architecture.....	148
II.10.5.7	Basic principles for the use of intelligent peripherals	149
II.11	INTELLIGENT NETWORK EXERCISES	150
II.11.1	Questions.....	150
II.11.2	Answers	151

III The signaling system N°7155

III.1	STRUCTURE OF A SIGNALING NETWORK.....	155
III.1.1	Signaling modes	155
III.1.1.1	Associated mode	155
III.1.1.2	Nonassociated mode	156
III.1.1.3	Quasi-associated mode	156
III.1.2	Signaling transfer point.....	156
III.1.3	Signaling links.....	158
III.1.3.1	A link	158
III.1.3.2	B link	158
III.1.3.3	C link	159
III.1.3.4	D link	160
III.1.3.5	E link	160
III.1.3.6	F link.....	161
III.1.3.7	Signaling linkset	161
III.1.3.8	System performance	162
III.2	SS7 PROTOCOL STACK	163

III.3	MTP	164
III.4	MTP LEVEL 2	166
III.4.1	<i>MTP2 functions</i>	166
III.4.1.1	Signal unit delimitation	166
III.4.1.2	Signal unit alignment	166
III.4.1.3	Error detection	167
III.4.1.4	Error correction	167
III.4.1.5	Initial alignment	168
III.4.1.6	Signaling link error monitoring	168
III.4.1.7	Flow control	168
III.4.2	<i>Signal unit format</i>	169
III.4.2.1	Flags	170
III.4.2.2	Length indicator	171
III.4.2.3	Service information octet	171
III.4.2.4	Sequence numbering	172
III.4.2.5	Indicator bits	173
III.4.2.6	Check bits	175
III.4.2.7	Signaling information field	175
III.4.2.8	Status field	175
III.5	MTP LEVEL 3	178
III.5.1	<i>Routing label</i>	178
III.5.2	<i>Signaling message handling functions</i>	179
III.5.2.1	Message discrimination and message distribution functions	180
III.5.2.2	Message routing function	181
III.5.3	<i>Routing in a signaling system n°7</i>	182
III.5.4	<i>Load sharing</i>	182
III.5.5	<i>Signaling network management</i>	183
III.5.5.1	Signaling network management messages format	184
III.5.5.2	Signaling link management	184
III.5.5.3	Signaling traffic management and signaling route management functions	185
III.6	SCCP	198
III.6.1	<i>Services provided by the SCCP</i>	198
III.6.2	<i>SCCP message structure</i>	199
III.6.2.1	Connection request (CR)	201
III.6.2.2	Connection confirm (CC)	206
III.6.2.3	Connection refused (CREF)	207
III.6.2.4	Released (RLSD)	208
III.6.2.5	Data form 1 (DT1)	209
III.6.2.6	Data form 2 (DT2)	210
III.6.2.7	Expedited data (ED)	212
III.6.2.8	Reset request (RSR)	213
III.6.2.9	Protocol data unit error (ERR)	214
III.6.2.10	Inactivity test (IT)	214
III.6.2.11	UnitData (UDT)	215
III.6.2.12	Unitdata Service (UDTS)	215
III.6.2.13	Extended unitdata (XUDT)	216
III.6.2.14	Extended unitdata service (XUDTS)	216
III.6.3	<i>Addressing with SCCP</i>	217
III.7	ISUP	221
III.7.1	<i>ISUP message</i>	221

III.7.1.1	Circuit identification code	224
III.7.2	<i>Call set up</i>	226
III.7.2.1	Initial Address Message (IAM)	226
III.7.2.2	Address complete message (ACM).....	230
III.7.2.3	Answer (ANM).....	231
III.7.2.4	Connection message (CON)	232
III.7.2.5	Subsequent address message (SAM)	232
III.7.2.6	Information request.....	233
III.7.2.7	Pass along and SCCP methods	235
III.7.2.8	Continuity check.....	237
III.7.2.9	Overload	239
III.7.2.10	Suspend and resume	239
III.7.2.11	Call progress (CPG).....	240
III.7.2.12	Call release	241
III.7.2.13	Reset circuit (RSC).....	242
III.7.3	<i>Voice / data circuits monitoring</i>	243
III.7.3.1	Circuit group query.....	243
III.7.3.2	Circuits and circuit group blocking and unblocking	245
III.7.3.3	Circuit and circuit group reset.....	248
III.7.4	<i>Additional ISUP messages</i>	248
III.8	EXERCISES ABOUT SIGNALING SYSTEM N°7	250
III.8.1	<i>Questions</i>	250
III.8.2	<i>Answers</i>	251
	Bibliography.....	252
	Acronyms.....	255
	Keywords.....	262
